Results of Radioactivity Measurements

To ensure the safety of local and international students, Joshibi implemented radioactivity measurements in August 2011 both at Sagamihara (in Kanagawa) and Suginami (in Tokyo) Campuses. These were conducted by a special organization in radioactivity, using a credible high precision measuring device. Their results showed that radioactivity level at the campuses were completely acceptable and brought in no problems. Thus, it has been scientifically proved that we can perform normal daily activities without any problems. At Joshibi campuses, you do not need to worry about radioactivity at all. Please do continue studying with us at ease. We also expect that prospective students will surely come over here to study.
